action + evidence references
Risk-Trust Gate
Stored values and fixed rules only. Never calls a language model.
current facts
1 Guardrails
May the agent propose this at all?
2 Floor rules
Does a fixed rule force the owner to decide?
3 Risk against competence
The earned test on R(c), W, A and D
extracted facts
The five routes · the only ways out of the gate
Refused
a guardrail failed
logged · no counter moves
Escalated
a floor rule fired
never earnable
Owner approval
not yet earned
lapses after T_exp(c)
Recall window
earned, not fully
reversible
Automatic
earned and fully
reversible · ε audited
released for execution
Refuse and escalate are reached by fixed rules, so no amount of competence unlocks them.
That is what makes the floor non-earnable.

Domain and Control Classes

The main business records and the classes that control actions. Each action belongs to one agent and one action class. Competence is held per agent and action class pair, with observed outcomes and owner approval measures counted separately. RiskTrustGate validates and routes actions and releases only eligible ones to ActionExecutor.

Entity Relationship Diagram

Clients link to projects, projects to tasks, and each task to at most one team member. Every action links to the facts it relies on, and every action must rely on at least one. Decision rows are never altered once written, so a change of route adds a further row and the sequence reads back in the order it happened.
